A guide to publishing in scholarly journals

Online products - ScienceDirect, Scirus, Scopus and 2collab

ScienceDirect

ScienceDirect is Elsevier's full-text online platform which provides access to over nine million full-text articles, 80 million abstracts from 2,500 peer-reviewed journals, and more than 6,000 books. In addition, all references are linked across platforms to other STM publishers via CrossRef™.

ScienceDirect facilitates fast access to the world's leading scholarly research with Yahoo FAST powered search, interlinked references across books and journals, personalization options, and free e-mail alert and RSS services.

Did you know...

- All articles in ScienceDirect have citation scores viewable to all. As soon as your article is cited from any of the 15,800 journals covered by Scopus, your citations are displayed and readers can click through to a preview page on Scopus to see details of the citing articles.
- You can set up citation alerts to be alerted as soon as your article is cited.
- More than 11 million scientists regularly use ScienceDirect.

For more information please visit http://www.sciencedirect.com

SCIRUS

Search represents the driving force behind the web, and Scirus is the most comprehensive science-focused search engine available on the Internet, supporting over one million researchers, scientists and students worldwide.

Scirus offers users a unique combination of free web information and journal content, clearly branding search results from proprietary sources, assuring users the validity of the content. Web sources searched by Scirus include research institutes, governments, scientific organizations, conferences, scientists' homepages and company homepages worldwide.

In 2006 Scirus received the 'Best Specialty Search Engine Web Award' for the third consecutive year from the Web Marketing Association (WMA).

Scirus currently covers 6.6 million ScienceDirect articles, which is only a small portion of the more than 300 million pages and articles indexed. The key to Scirus' success is to remain an independent, reliable and comprehensive search engine.

Scirus topic pages

Scirus has recently launched Topic Pages, which provide an informal communication and collaborative platform for academic authors. These pages facilitate sharing of knowledge and provide the latest and most relevant journal and web results.

These freely-available pages are dedicated to specific topics and will include a concise but informative synopses written by the author, as well as author contributions with references, links to resources, cited working articles and web results and topic relevant web links. The pages also offer authors the opportunity to increase their visibility within a particular field of topic-relevant research.

SCOPUS

Scopus is the world's largest abstract and citation database of research literature and quality web sources. Updated daily, Scopus includes 15,800 peer-reviewed journals from more than 4,000 international publishers and helps scientists find the information they need quickly and easily.

Scopus can help you...

- Stay up to date with the most relevant research.
- Uncover important articles that you may otherwise miss.
- Evaluate and identify journal titles for your next publication.
- Find co-authors for collaboration.
- Monitor citations to your article.

2collab: the research collaboration tool

2collab is a new online platform that facilitates the organizing, sharing and discovery of information related to your research interests. You can use 2collab just by yourself as a convenient online reference manager, with your research groups or colleagues to manage collaboration on projects, or as a place to bring your scholarly network online.

2collab works by providing three types of tools for you to use, all integrated in one website:

1. Online bookmarking and reference management.
2. Group collaboration.
3. Networking.

Use 2collab and you can:

- Bookmark articles in one click from Scopus, ScienceDirect – and any other publisher platform.
- Store, index (via tags, which are keywords that you add to each bookmark) and search your bookmarks/references easily.
- See what others have bookmarked and referenced – you can search for other 2collab users and see other people's public bookmarks and groups.
- Exchange knowledge and approaches.
- Find and initiate contact with new research partners.
- Profile yourself and your research – you can create an online profile and use the Scopus Author ID to automatically import all your published works and citations.

2collab is a free platform provided by Elsevier. You only need to register your username and e-mail to start using it immediately. Try it out today http://www.2collab.com
